Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming is an essential step in the software development process that encourages creative thinking and systematic problem-solving. It helps identify real-world challenges, generate innovative ideas, evaluate possible solutions, and select the most practical approach for implementation. This collaborative process ensures that the final solution effectively addresses user needs while remaining technically feasible.

For the **Nutrition Assistant** project, brainstorming focused on understanding the challenges people face in maintaining a healthy diet, planning balanced meals, and monitoring their daily nutritional intake. Various solution ideas were explored, organized into meaningful categories, and evaluated based on their feasibility, impact, and usefulness before selecting the final application features.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & Idea Prioritization

Nutrition Assistant is a MERN Stack web application that helps users plan healthy meals, receive personalized nutrition suggestions, monitor daily nutritional intake, and maintain healthier eating habits through a secure and user-friendly platform.

- 🕒 10 minutes to prepare
- 🕒 1 hour to brainstorm
- 👤 Individual Project

➔

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

A Team Gathering

As an individual developer, project requirements were analyzed to identify common nutrition management problems and define the core objectives of the Nutrition Assistant application.

B Set the Goal

Develop a MERN-based Nutrition Assistant that enables users to:

- Register and log in securely
- Create personalized meal plans
- Receive nutrition suggestions
- Track daily nutrition
- Manage their profile
- Access a responsive dashboard

C Preparation

- Review project requirements
- Identify target users
- Select MERN Stack technologies
- Design project workflow
- Plan implementation modules

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM STATEMENT

How might we develop a web-based Nutrition Assistant that enables users to create personalized meal plans, receive nutrition suggestions, monitor daily nutritional intake, and manage their health through a secure, responsive, and easy-to-use platform?

Key Rules of Brainstorming

To run a smooth and productive session

- 🎯 Stay focused on user needs
- ⚙️ Consider practical implementation
- 💡 Encourage innovative ideas
- 🚀 Think creatively
- ❌ Avoid judging ideas early
- 👤 Keep the solution user-centric

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

List down as many ideas as possible that can solve the identified problem in user nutrition management.

15 minutes

TIP

Use sticky notes or the pencil icon to write your ideas. Select an icon to start drawing connections.

Additional Ideas

3 Group Ideas

Cluster similar ideas together to identify major categories and organize them into meaningful feature groups.

20 minutes

TIP

Add labels to sticky notes, arrange within groups and use colors to highlight important themes.

Step-3: Idea Prioritization

4 Prioritize

The ideas generated were evaluated based on Importance (Impact on users) and Feasibility (Ease of implementation). The grid below shows which ideas we will implement first.
