Project Name	Nutrition Assistant
Maximum Marks	5M

Project Overview:

Project Name: Nutrition Assistant

Project Description: Nutrition Assistant is a MERN Stack web application designed to help users maintain a healthy lifestyle by providing personalized meal plans, nutrition suggestions, and daily nutrition tracking. The application allows users to register securely, manage their profiles, generate customized meal plans, and monitor their nutritional intake through an interactive dashboard.

Project Version: Version 1.0

Testing Period: 24/06/2026 – 13/07/2026

Testing Scope:

Features and Functionalities to be Tested:

- User Registration
- User Login and JWT Authentication
- Dashboard Navigation
- Personalized Meal Plan Generation
- Nutrition Suggestions
- Daily Nutrition Tracking
- Profile Management
- Logout Functionality
- Responsive User Interface
- API Integration between Frontend and Backend
- MongoDB Data Storage and Retrieval

User Stories / Requirements to be Tested:

- User can register with valid information.
- User can log in securely using registered credentials.
- User can access the dashboard after successful login.
- User can generate personalized meal plans.
- User can view nutrition suggestions.

- User can monitor daily nutritional intake.
- User can update profile information.
- User session is protected using JWT authentication.
- User can log out successfully.
- Application works correctly on different screen sizes.

Testing Environment:

- **URL/Location:**

Frontend: `http://localhost:5173`

Backend API: `http://localhost:8000`

- **Database:** MongoDB
- **Development Environment:**

- Visual Studio Code
- Node.js
- Express.js
- React.js (Vite)
- MongoDB
- Postman
- Google Chrome

Credentials (if required):

Admin Credentials:

Email: nehavundavilli27@gmail.com

Password: neha27

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration	Enter valid user details → Click Register	User account is created successfully	Registration completed successfully	Pass
TC-002	User Login	Enter registered email & password → Click Login	User is authenticated and redirected to Dashboard	Dashboard loaded successfully	Pass
TC-003	Create Personalized Meal Plan	Login → Navigate to Meal Planner → Generate meal plan	Personalized meal plan is generated and displayed	Meal plan generated correctly	Pass
TC-004	View Nutrition Suggestions	Login → Open Nutrition Suggestions page	Personalized nutrition suggestions are displayed	Suggestions displayed successfully	Pass
TC-005	Daily Nutrition Tracking	Login → Add daily nutrition details	Nutrition data is stored and reflected in tracking section	Data saved successfully	Pass
TC-006	Profile Management	Login → Update profile information → Save changes	Updated profile information is stored successfully	Profile updated successfully	Pass
TC-007	User Logout	Click Logout	User session ends and redirects to Login page	Logout completed successfully	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Invalid login credentials were not displaying a clear error message.	Enter an incorrect email or password and click Login .	Medium	Closed	Improved validation message for failed authentication.
BG-002	Generated meal plan was not refreshing immediately after creating a new plan.	Generate a meal plan and revisit the dashboard.	Medium	Closed	Automatic data refresh implemented after meal generation.
BG-003	Updated profile details were not reflected until the page was refreshed.	Edit profile information and save changes.	Low	Closed	State management updated to reflect changes instantly.
BG-004	Nutrition suggestion page showed a loading delay on the first request.	Login and open the Nutrition Suggestions page.	Low	Closed	API response handling optimized for smoother loading.

Sign-off:**Tester Name:** Vundavilli Neha**Date:** 13/07/2026**Signature:** Vundavilli Neha**Notes:**

- Ensure that all core functionalities, including **User Registration, Login, Meal Plan Generation, Nutrition Suggestions, Daily Nutrition Tracking, Profile Management, and Logout**, are thoroughly tested using both valid and invalid inputs.
- Verify that the application correctly handles user authentication and protects secured routes using **JWT-based authentication**.

- Record any defects with complete details, including the issue description, steps to reproduce, severity level, current status, and the resolution implemented during testing.
- Validate that the application provides accurate nutrition information, stores user data securely in **MongoDB**, and displays personalized meal plans and nutrition suggestions correctly.
- Confirm that the application performs consistently across different screen sizes and modern web browsers, ensuring a responsive and user-friendly experience before deployment.
